FACT SHEET

sip:wise RB

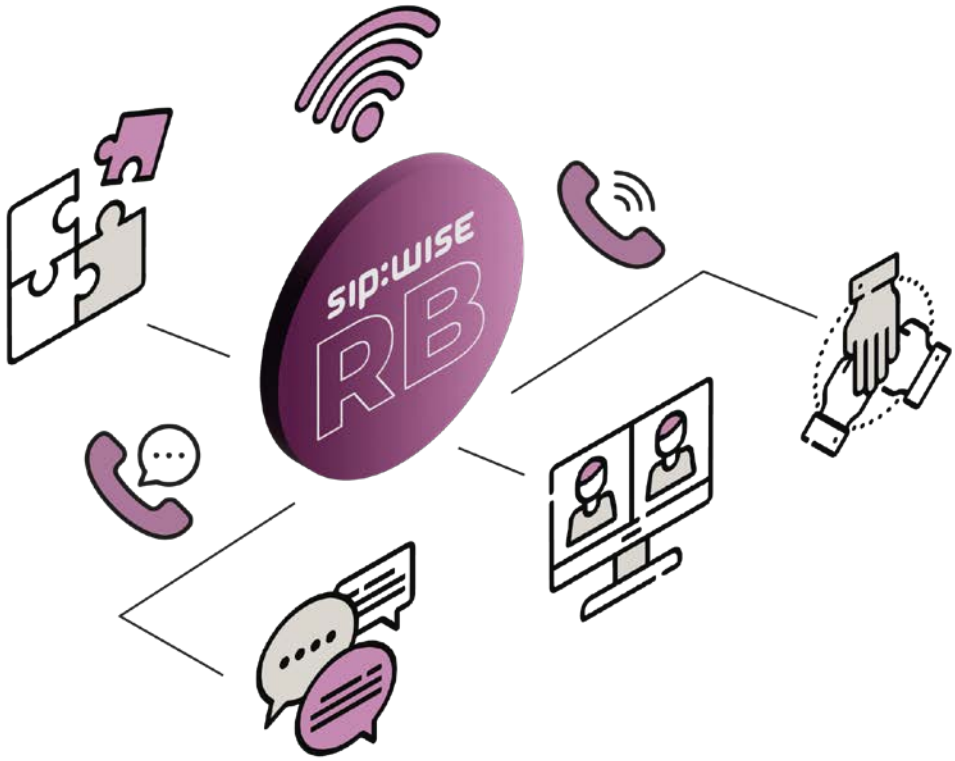
RB

Secure, all-in-one communication and collaboration platform

RB

Secure, all-in-one communication and collaboration platform

Rainbow (RB) is an enterprise-grade, cloud communication platform fully developed in Europe by Alcatel-Lucent Enterprise and Sipwise with services delivered from secured data centers across the globe.



Communicate & Engage in Secured and Trusted Environments

Asynchronous and real-time communication, PSTN calls, audio and video conferencing, persistent collaboration and messaging, remote control and much, much more. For teams of all sizes. Any deployment model and any device, while maintaining security.

Secure, all-in-one cloud communication platform

Rainbow is an enterprise-grade, cloud communication platform fully developed in Europe with services delivered from secured data centers across the globe.
Depending on your needs, Rainbow can be deployed on-premises, hybrid or from the cloud. The open architecture and rich-telephony feature support allow for connecting your existing telephony system and integration of Rainbow into business processes and other SaaS solutions.

RB PRODUCT OVERVIEW

Deployment Options

Rainbow (private) – on premises or hybrid

Rainbow can be delivered either on-premises or hybrid, providing flexibility of choice and adapting to your business requirements.
Does your business need a fully encapsulated environment hosted either on-premises or in a private data center of your choice or do you prefer to go cloud but retain existing investments on-premises and add collaboration on top of your existing telephony system? Whichever you choose Rainbow has got you covered.

Rainbow Hub – Cloud telephony Unified Communication as a Service (UCaaS)

Rainbow Hub is an all in one (telephony, collaboration and video conferencing) cloud-based solution for all your communications needs. Easy to use with a single intuitive application, available on PC, tablet and smartphone. It comes with a flexible pay per user model with full scalability.

Rainbow Communications Platform as a Service (CPaaS)

Integrate real-time communication and collaboration into your existing ecosystem with CPaaS to match your industry standards and processes.
Teamwork, communication, and collaboration are important in a modern work environment. CPaaS is a cloud technology that allows you to integrate real-time communications into your existing business applications without complex engineering, whatever your business or size.

RB FEATURES

Audio & Video Conferences

Create or join audio and video meetings with up to 120 participants and up to 12 simultaneous video streams.

Team Collaboration

Instant messages and groups, file sharing, company and public channels, guest access, screen sharing, and many others.
